注意: 此软件升级不适用于 JBL Bar 9.1 中国版。

---THE END---

How to Manually upgrade my soundbar firmware version

You can download the latest software version by Clicking [here](#). Use the bin file after you have unzipped it:

- JBL_BAR_9_1.bin
1. Prepare one empty USB thumb drive and create a new folder (named “UPG”) in the root directory, then copy the bin file to the new UPG folder.
 2. Please mount the two detachable speakers onto the Soundbar.

3. Please insert the USB thumb drive to the Soundbar USB port on its rear panel and long-press the Soundbar buttons: **[POWER]** and **[VOL-]** for 10 seconds to start the software upgrade.
4. You will now see “**UPDATING**” on the Soundbar front display.
5. Wait for the software upgrading to complete. The unit will reboot and go back to standby.
6. After successful upgrading, to check the software version by long-pressing the main Soundbar unit **[VOL-]** and **[SOURCE]** buttons, the Soundbar should be upgraded to version “**ver. 21.13.11.80**”

Note:

- If your Soundbar is connected to the internet, its software will be automatically upgraded overnight when it is not in used.
